

Cleaning Foras Stone with the Foras Cleaning Pack.

Natural stone like all materials exposed to the elements will attract dirt and algae over time, unlike man made materials natural stone can be cleaned again and again bringing back as good as new.

We recommend chlorine granules for cleaning and here are some recommendations for a trouble free application.

The kit should include a container of chlorine granules, a pair of disposable gloves and eye protection and a mask. Care should be taken when using chlorine as it can cause skin irritation and bleach clothing please read chemical labelling.

You will need a pressurised spray applicator available from any DIY store.

1: Put on the gloves and eye protection.

2: Fill the applicator with 3 litres of warm water and add the full container of chlorine granules. (1 cap full of granules per 3lts of water for badly affected areas, reduce the chlorine granules by half on regular treatments or for dosing water features).

3: Screw the lid back on the applicator and shake vigorously to ensure all the granules have dissolved. The solution will be milky. In sure all the granules have dissolved to prevent a nozzle blockage, this may require another shake.

4: Pressurise the applicator and apply generously to the affected areas, wetting the area with clean water before the chlorine mix sometimes helps to speed the chlorine reaction time.

The chlorine solution will start to act immediately; care should be taken around plants and grass especially if any wind is blowing.

Leave for at least one hour, badly affected areas may need another dose. Regular treatments are the best way to stop algae build up. Regular treatments allow the dosage rate to be reduced.

Cont:-

5: When the cleaning process is complete we recommend washing the treated area with clean water.

6: Clean out the applicator with clean water to prevent any damage to the seals.

If you have a water feature that is suffering from a build up of algae we recommend simply repeating steps 1 to 3 remembering to half the dosage of granules in a 3 litres of warm water, then unscrew container and pour in solution.

Chlorine has been tested on rainbow, teak, beige, fossil and king stone we recommend a trial on all other stones before application.

Chlorine can be used as a patio cleaner and to running water features to prevent algae build up. Tester kits for swimming pools are available to check the chlorine levels in water features which will insure the levels are completely safe for birds.

Foras Stone Cleaning Pack

Our Foras Stone Cleaning Pack contains:-

- 1 x container of chlorine granules
- 1 x pair of protective gloves
- 1 x pair of protective goggles
- 1 x protective mask.

Packs can be ordered from us direct.

For further information, help or ordering contact us.
